

## Paid Internship

This position would provide hands on experience in many aspects of a professional, regulated, dynamic, fast-paced, ever changing entrepreneurial environment. We require an intern to assist in: formulating new and ongoing projects; day-to-day production of reports; archival of reports, files, and R&D articles, both electronic and paper; retrieval of, scientific and market research articles; review, organization of and participation in the validation of products and operational procedures. Duties and responsibilities would included testing and validating new products from a customer perspective; assist in the accessioning of scientific articles in molecular genetics, nutrition, exercise physiology, *etc.*; and in the organization and archival of client information in a HIPAA environment; and generally support the Operations and R&D teams in daily tasks as needed

We are looking for a recent graduate at the bachelors' level or senior in science, most preferably in molecular genetics, biochemistry, nutrition, kinesiology or computer science. This position requires an individual who enjoys a discipline but flexible workflow, a high standard of accuracy when performing tasks under pressure. An ideal candidate would have a positive can-do attitude, motivation for excellence, dedication to the task at hand, enjoys being part of a team and most importantly, an unlimited good sense of humor.

This position reports to the Project Manager, and applications should be sent to Colin Finch by email only (please do not telephone) at [cfinch@sciona.com](mailto:cfinch@sciona.com). More information about Sciona can be found on our website, [www.mycellf.com](http://www.mycellf.com).
