## Temporary Electrical Engineer

### Job Summary

The temporary engineer will be working as part of the Operations / Product Development teams to support circuit/component design, improvement and documentation for an IVD automated assay system. This position reports to the Vice President of Operations.

### Essential Duties and Responsibilities:

1. Update, evaluate, and create necessary circuit and board schematics for product under development.
2. Support implementation of engineering documentation, part numbering, and revision structure, including use of appropriate software.
3. Analyze and provide feedback on part design, DFM, and documentation.
4. Interact on a daily basis with GBS engineers, vendors and manufacturing personnel.
5. Thrive in a highly dynamic multitasking medical device development and manufacturing environment.
6. Support a collaborative, knowledge-based product team environment.

### Minimum Qualifications:

#### Education & Experience:

1. Minimum BS Degree in Electrical Engineering or Physics.
2. Experience with CAD to create appropriate schematics and engineering documentation management is essential.
3. Experience with GD&T, best manufacturing practices, DFM.
4. Knowledge and application with BOM structure.

#### Skill Set:

1. Ability to work in a fast-paced development, engineering, and manufacturing environment.
2. Expert in design assemblies, drawings, and documentation.
3. Self-directed, efficient, and with a high level of initiative.
4. Detail-oriented and organized.
5. Strong communication skills, ability to interface with engineering, manufacturing, and vendors.
6. Ability to work both individually and as part of a team.
7. Results-oriented with proven track record of driving projects to completion.
8. Strong computer skills (MS Word, Excel, Internet).
9. Familiarity with FDA regulations, documentation, and qualification beneficial.
