

### Post-Doc Research Associate

To perform, on a very independent basis, all phases of experimental investigations and to collaborate with Principal Investigators and senior researchers in the progress of major research projects. To act as technical advisor to laboratory technical, support and auxiliary staff. Five years of specified experience in technical investigatory techniques. M. D. or Ph. D. in a specified basic science field will suffice for 2 yrs experience. Three or more years of related experience. Experience and salary are rated according to the NIH scale. Extensive knowledge of standard research practices and methods, particularly in the field of assignment, and of other values of research in the field involved. Ability to determine the approach to a research problem which will give the most significant results and to develop, lay out and plan the actual experiments to be performed, and ability to devise new methods and techniques as needed in experimentation. Ability to plan, organize and direct work of supporting personnel. Ability to prepare and write reports on research projects. Ability to establish and maintain effective working relationships with associates, other research personnel and the general public. **Please apply for the position on National Jewish Health Human Resources website or directly contact Dr. Hong Wei Chu at (303)-398-1689 or [chuhw@njhealth.org](mailto:chuhw@njhealth.org).**
